

Questions and Answers – Solicitation W911RQ-19-R-0003

As of 24 JAN 2019

Q: Do you have higher-resolution or live CAD versions of the drawings available?

A: Unfortunately, RRAD does not have any higher-resolution or live versions of the files already available with this Solicitation announcement on FedBizOpps. They are all scans from a Technical Data Package developed in the early 1980s.

Q: Can AMS 4029 or other similar aluminum types be substituted for the 2014-T651 aluminum called out in the drawing package?

A: Our engineering and quality staff did some research, and while it is true AMS 4029 is very similar to 2014-T651 aluminum, some characteristics such as elastic modulus and density are different. RRAD requires that the items be produced in 100% conformance to the drawings and their stated material type at this time.

Q: FedBizOpps won't accept my company's information for access to the drawings! How can I access the Technical Data Package?

A: If FedBizOpps won't accept your credentials, and your company is registered with the DLA Joint Certification Program, please send your information to Contract Specialist Jeffrey Woods at Jeffrey.R.Woods19.civ@mail.mil . Once we can verify your company's registration, we will e-mail the drawings.
